DOCUMENT SUMMARY

Document Item	Current Value
Document Title	Technical Interface Specification for eHR Encounter Record
Creation Date	20 Jul 2012
Date Last Modified	15 Sep 2016
Current Document Issue	Version 1.4.0
Document Description	The paper explains the technical interface for implementing Health Level Seven (HL7) version 2.5 standards messaging for transferring Encounter record from healthcare providers (HCP) to eHR system for Hong Kong Special Administrative Region eHR. The document should be read in conjunction with other related documents suggested by the eHR Information Standards Office.
Prepared by	eHR Information Standards Office
Contact Information	eHR@fhb.gov.hk

AMENDMENT HISTORY

Version No.	Summary of Changes	Date
1.0.0	Original version	20 Jul 2012
1.1.0	Enhanced according to the -dataset as of Feb 2013 defined by eHR Information Standards Office	13 Mar 2013
1.2.0	<ul style="list-style-type: none"> • Updated the column 'Remarks' of the following fields: <ul style="list-style-type: none"> - <PID.3><CX.5> • Updated the column 'Len' of the following fields: <ul style="list-style-type: none"> - <PV1.37> extend to 520 • Added the remarks in XML PREDEFINED ENTITIES: 'The prefix of namespace in XML in HL7 message is not expected.' • Updated remarks of 'Death before arrival indicator' • Updated the checking rule of the following data fields: <ul style="list-style-type: none"> ○ Encounter type ○ Last update datetime • Add remarks to 'Record Key' • Aligned the terms used in eHR Sharing System (eHRSS) Bill: <ul style="list-style-type: none"> ○ Participant -> eHR Healthcare Recipient ○ Enroll -> Register • Update the template of cover page and descriptions in footer • Update the contents in section 'Intellectual Property Rights Notice' • Remove "CDA" components in: <ul style="list-style-type: none"> ○ section 'Objective' ○ section 'Document Map' ○ section 'Document Summary' ○ section 'Abbreviation' ○ section 'Character Set And Encoding' 	19 Jun 2014

	<p>added to state the 3 message upload mode</p> <ul style="list-style-type: none"> • Section 14.8 Re-materialisation message is added to provide the re-materialisation message example • Update Section 10.13, Section 10.14, OBX - Observation/Result Segment OBX.4's remarks • Add "Last update datetime", MSH.5, MSH.8 and MSH.15 in message examples in section 14 • Update namespace from "xmlns:hl7="urn:hl7-org:v2xml"" to "xmlns="urn:hl7-org:v2xml"" in message examples in section 14 	
1.4.0	<ul style="list-style-type: none"> • Changed from 'conditional mandatory' to 'optional' <ul style="list-style-type: none"> a. 'Episode start specialty remarks' b. 'Episode end specialty remarks' c. 'Visit specialty remarks' d. 'Referral specialty remarks' 	15 Sep 2016

1 PURPOSE

1.1 OBJECTIVE

This document describes the technical interface for implementing Health Level Seven (HL7) version 2.5 standards messaging for transferring eHR Encounter record from healthcare providers (HCP) to eHR system.

There are TWO data exchange standards for uploading clinical records to eHR system:

- HL7-HK Message Standards
- HL7-HK Localised Bulk Load Standards

HL7-HK Message Standards will be described in detail in this document. For the HL7-HK Localised Bulk Load Standards, please refer to ‘Bulk Load Standards Specification for eHR Record’.

1.2 INTENDED READERS

This document is intended for all parties involving the interface development of EMR and eHR in Hong Kong.

2 SCOPE

This reference defines the implementation of the HL7 version 2.5 messaging, for communication of HL7 messages between EMR applications and eHR system. The structure of a message, the mechanism of creating a message and data exchange format will be covered in this document. Specifically, this document contains:

- Structure of HL7 version 2.5 message
- Data definition and mapping
- Examples of HL7 version 2.5 message
- Implementation requirements

The specification provides interpretation and guidance to which HL7 trigger events would be applied and what data elements would be mandatory (required), optional, or conditional (required, based on a condition). Besides, this document gives relevant usage notes for interfacing to eHR system and provides consistent use of data definitions.

This document is referring to the health data defined in the eHR sharable dataset domain “Encounter” mentioned in **eHR Content Standards Guidebook** in eHR Office website. It provides interpretation and guidance to which HL7 trigger event and data elements are required for interfacing to eHR system.

3 REFERENCES

- Data Interface Requirement Document
 - Data Requirement Specification for eHR Encounter Record
 - Communication Protocol Specification
- eHR Information Standards Document
 - eHR Content Standards Guidebook
 - eHR Data Interoperability Standards
 - eHR Contents
 - eHR Codex

4 DOCUMENT MAP

The following table describes the reference documents related to the sharable data domain ‘Encounter’.

	Document ID	Document Name	Description
Basic Information	N/A	eHR Content Standards Guidebook	It defines the initial set of content and information standards for Hong Kong eHR.
	S01	Data Interoperability Standards	It defines the data requirements and messaging standards to support standards-compliant interoperability.
Data Requirement	N/A	eHR Contents Code Set	<p>It defines the data requirements of each sharable dataset domain.</p> <p>The updated code set will be posted in eHR office website for reference.</p>

Technical Interface Specification for Encounter Record

	Document ID	Document Name	Description
	N/A	eHR Codex List	<p>It defines a list of code tables which eHR data should be conformed to.</p> <p>The updated code tables will be posted in eHR office website for reference.</p>
	S17	Data Requirement Specification For eHR Encounter Record	<p>It describes the data requirements for implementing Health Level Seven (HL7) Version 2.5 standards messaging for “Encounter” data upload. The document should be read in conjunction with other related documents suggested by the eHR Information Standards Office.</p>
Technical Requirement	S19	Technical Interface Specification for eHR Encounter Record	<p>It describes the technical interface for implementing Health Level Seven (HL7) version 2.5 standards messaging for transferring eHR Encounter record from healthcare providers (HCP) to eHR system.</p>

Technical Interface Specification for Encounter Record

	Document ID	Document Name	Description
	S18	BLS Technical Interface Specification for eHR Encounter Record	<p>It describes the detail technical requirements for implementing HL7-HK Localised Bulk Load Standards (BLS) to upload “Encounter” data. The document should be read in conjunction with other related documents suggested by the eHR Information Standards Office.</p>
	S55	Communication Protocol Specification	<p>It defines the communication protocols supported by eHR-HK clinical data exchanges. Related technical issues will be included.</p>

5 DEFINITIONS AND CONVENTIONS

5.1 HL7 MESSAGE STANDARDS

Health Level Seven (HL7) version 2.5 message standards will be implemented for healthcare records exchange under eHR program. HL7 provides a framework and related standards for the exchange, integration, sharing, and retrieval of electronic health-related information.

Information using the HL7 standard is sent as a collection of one or more messages. The HL7 messages are used to transfer electronic data between different healthcare systems. Each HL7 message sends information about a particular event such as patient admission and laboratory records.

To learn more about the HL7 organization and standards, refer to the official HL7 website.

5.2 ABBREVIATION

Term	Description
ENCTR	Encounter
CDR	Clinical Data Repository
eHR	Electronic Health Record
EMR	Electronic Medical Record
HCP	Healthcare Provider
HL7	Health Level Seven
SIU	HL7 message type of “Scheduling”
ADT	HL7 message type of “Person Administration”
HCR	eHR Healthcare Recipient

5.3 NOTATION

Value	Description
“quoted”	Fixed Value
#	HL7 Mandatory Field
✓	Required HL7 Segment
0..1	Zero to One occurrence
1..1	Exact One occurrence
0..*	Zero to Many occurrence
1..*	One to Many occurrence
N/A	Not Applicable
A01 - A99	HL7 event code of “Person Administration”
S01 - S99	HL7 event code of “Scheduling”
SCN1 – SCN99	Scenario numbering

Value	Description
RP/#	Repeatable Indicator [Y:Yes N: No] of HL7 element
TBL#	HL7 Table Reference Number
[]	Optional
{ }	Repeatable
YYYY	Year
MM	Month
DD	Day
hh	Hour (24-OTHour)
mm	Minute
ss	Second
.sss	Millisecond

6 ASSUMPTIONS

- HCP is responsible for ensuring the integrity, accuracy and completeness of structured data and the image report when sending data to eHR.
- It is recommended HCP should send the updated clinical record to eHR as soon as possible when there are any changes or new records of the eHR Healthcare Recipient (HCR).
- To ensure the integrity of the Encounter Record, the complete set of structured data of an encounter record should be sent for any amendment.

7 DELIVERY REQUIREMENTS

- HL7 version 2.5 message standards in XML format will be implemented for delivering all ‘Encounter’ event messages defined by eHR.
- The sharable dataset domain ‘Encounter’ supports eHR Data Compliance Level 3 only. Before sending clinical record to eHR, Healthcare Provider (HCP) has to register which data compliance levels she can comply to.
- A complete set of updated Encounter data with an unique record key of the record is expected to be uploaded to eHR. eHR will use the HCP unique record key for subsequence data amendments in eHR repository.
- HCP must ensure the data submitted to eHR is complied with the compliance levels declared in the message. The detail definition of the Data Compliance Level is stated in eHR Content Standard Guidebook posted in eHR Office website.

8 Data Upload Requirements

8.1 TYPES OF FILE UPLOAD MODE

There are three types of file upload mode:

1. **Incremental mode** is the format for HCP to upload sharable data in ONE batch.
2. **Materialisation mode** is the format for HCP to upload a HCR's specific sharable dataset that exists in EMR, e.g. new registered HCR and re-registered HCR.
3. **Re-materialisation mode** is the format for HCP to clear the clinical data uploaded in eHR. It is required to upload the re-materialisation message before HCP next materialisation message for same HCR.

The following table shows the files required for different upload mode and its schedule:

	HCR information	Clinical Data	Schedule
Incremental Mode	Required	Required	Within agreed period
Materialisation Mode	Required	Required	Within agreed period
Re-materialisation Mode	Required	Not required	

Remarks:

For Materialisation Mode, ‘Update’ and ‘Delete’ transaction types are not accepted. If ‘Update’ or ‘Delete’ transaction type is uploaded using materialisation mode, the record will be rejected by eHR.

9 SCENARIO OF HL7 MESSAGE FROM HCP

The following subsections will address the scenarios which will trigger HL7 event messages notification upload from HCP to eHR. Under each scenario, the corresponding system workflows and HL7 event message type used will be described. Details of data mappings of the message event will be discussed in *Section 9 – Data Mapping*.

For the definitions of those data elements included in the HL7 event messages mentioned below, please refer to “Data Requirement Specification for eHR Encounter Record”.

Action	Scenario	HL7 Event Code	Transaction Profile Type (Refer to the code table 'Transaction profile type' in Section 15.1 -Transaction profile type)
Create appointment	Create appointment for inpatient (SCN1)	SIU^S12 (Notification of new appointment booking)	APP-IP
	Create appointment for outpatient (SCN2)		Without Episode number: APP-OP
	Create appointment for other encounter type (SCN3)		With Episode number: APP-OP-EP
Update appointment	Update appointment for inpatient (SCN4)	SIU^S14 (Notification of appointment modification)	APP-IP
	Update appointment for outpatient (SCN5)		Without Episode number: APP-OP
	Update appointment for other encounter type (SCN6)		With Episode number: APP-OP-EP
Cancel appointment	Cancel appointment for inpatient (SCN7)	SIU^S15 (Notification of appointment cancellation)	APP-IP
	Cancel appointment for outpatient (SCN8)		Without Episode number: APP-OP
	Cancel appointment for other encounter type (SCN9)		With Episode number: APP-OP-EP
			APP-OTH

Technical Interface Specification for Encounter Record

Create admission or attendance	Create admission for inpatient (SCN10)	ADT^A01 (Admit / visit notification)	ADM-IP
	Create admission for A&E patient (SCN11)	ADT^A04 (Register a patient)	ADM-AE
	Create attendance for outpatient (SCN12)		Without Episode number: ADM-OP
	Create attendance for other encounter type (SCN13)		With Episode number: ADM-OP-EP
Update admission or attendance	Update admission for inpatient (SCN14)	ADT^A08 (Update patient information)	ADM-IP
	Update admission for A&E patient (SCN15)		ADM-AE
	Update attendance for outpatient (SCN16)		Without Episode number: ADM-OP
	Update attendance for other encounter type (SCN17)		With Episode number: ADM-OP-EP
Cancel admission or attendance	Cancel admission for inpatient (SCN18)	ADT^A11 (Cancel admit / visit notification)	ADM-IP
	Cancel admission for A&E patient (SCN19)		ADM-AE
	Cancel attendance for outpatient (SCN20)		Without Episode number: ADM-OP
	Cancel attendance for other encounter type (SCN21)		With Episode number: ADM-OP-EP
Create Discharge	Discharge of inpatient (SCN22)	ADT^A03 (Discharge / end visit)	DIS-IP
	Discharge of A&E patient (SCN23)		DIS-AE

Cancel discharge	Cancel discharge of inpatient (SCN24)	ADT^A13 (Cancel discharge / end visit)	DIS-IP
	Cancel discharge of A&E patient (SCN25)		DIS-AE

9.1 CREATE APPOINTMENT

The following sections describe the scenarios where new appointments created in HCP should be uploaded to eHR.

9.1.1 Create Appointment for Inpatient (SCN1)

Description

When a new appointment record is created for an inpatient in HCP, such appointment record should be submitted to eHR.

9.1.2 Create Appointment for Outpatient (SCN2)

Description

When a new appointment record is created for an outpatient in HCP, such appointment record should be submitted to eHR.

9.1.3 Create Appointment for Other Encounter Type (SCN3)

Description

When a new appointment record is created for other encounter type patient in HCP, such appointment record should be submitted to eHR.

9.1.4 General Workflow

- i. HCP creates an appointment record for a patient and stores the record in her local system. The system recognises the record has not been submitted to eHR before.
- ii. HCP local system assembles messages representing the new appointment record according to the data requirements based on the HCP declared data compliance level.
- iii. If the HCP has ensured the completeness and correctness of the new appointment record, she can submit the record to eHR.

9.1.5 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN1	Create appointment for inpatient	<u>Message Event Code</u> SIU^S12
SCN2	Create appointment for outpatient	<u>Event Name</u> Notification of New Appointment Booking
SCN3	Create appointment for other encounter type	<u>HL7 Message Structure</u> S12

Message Format

<u>Required eHR Segment</u>	<u>SIU^S12</u>	<u>Schedule Information</u>	<u>Chapter in HL7 Specification</u>
✓	MSH	Message Header	2
✓	SCH [{ TQ1 }] [{ NTE }] [{ }	Schedule Activity Information Timing/Quantity Notes and Comments for the SCH --- PATIENT begin	10 4 2
✓	PID [PD1]	Patient Identification Additional Demographics	3 3

}	--- PERSONNEL_RESOURCE end	
]	--- RESOURCE end	
}		
✓ [Signature]	XML Digital Signature	

9.1.6 Assumption of HL7 Message Event “SIU^S12” Usage

- a new appointment record created in HCP and to be submitted to eHR

9.1.7 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘S12’ will be described.

Data Component Required: Person Identity, Encounter, Episode, Visit, Referral Source and Case Healthcare Professional

Purpose: To uniquely and accurately identify the HCR and create a set of appointment data

HCR Information

Remarks: Same data requirements in “HCR Information” are applied in all scenarios (Inpatient, outpatient, A&E patient, other encounter type and Consultation without patient's physical presence) mentioned in this document.

Data Element	Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)				
	Inpatient	Outpatient without Episode number (include Consultation without patient's physical presence)	Outpatient with Episode number	Other encounter type	
eHR number	M				
HKIC number	O if [Identity document number] is given M if [Identity document number] is blank				
Type of identity document	O if [Identity document number] is blank M if [Identity document number] is given				
Identity document number	O if [HKIC number] is given M if [HKIC number] is blank				
English surname	O if [English full name] is not blank M if [English full name] is blank				
English given name	O if [English full name] is not blank M if [English full name] is blank				
English full name	O if [English surname] and [English given name] are not blank M if [English surname] and [English given name] are blank <i>* If patient has either English surname or given name stored in local EMR system, full name should be filled.</i>				
Sex	M				
Date of birth	M				
eHR record type	M				

Detail Information

Data Element	Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)			
	Inpatient	Outpatient without Episode number (include Consultation without patient's physical presence)	Outpatient with Episode number	Other encounter type
Record key	M	M	M	M
Episode number	O	N/A	M	O
Attendance institution identifier	O	O	O	O

9.2 UPDATE APPOINTMENT

The following sections describe the scenarios where updated appointments in HCP should be uploaded to eHR.

9.2.1 Update Appointment for Inpatient (SCN4)

Description

When an inpatient appointment record was sent to eHR, and subsequently a modification on the appointment is made by a HCP, the updated appointment record should be submitted to eHR again.

9.2.2 Update Appointment for Outpatient (SCN5)

Description

When an outpatient appointment record was sent to eHR, and subsequently a modification on the appointment is made by a HCP, the updated appointment record should be submitted to eHR again.

9.2.3 Update Appointment for Other Encounter Type (SCN6)

Description

When other encounter type patient appointment record was sent to eHR, and subsequently a modification on the appointment is made by a HCP, the updated appointment record should be submitted to eHR again.

9.2.4 General Workflow

- i. HCP modifies an appointment record in her local system for whatever. The system recognises that the prior version of the appointment has already been submitted to eHR before.
- ii. The system constructs a message that contains the complete set of updated appointment record data with the Record key of the record to be amended.
- iii. HCP sends the message with the latest ‘Encounter’ data to eHR for amendment. The existing appointment record in eHR will then be overridden by the new set of data according to the Record key provided by HCP.

9.2.5 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN4	Update appointment for inpatient	<u>Message Event Code</u> SIU^S14
SCN5	Update appointment for outpatient	<u>Event Name</u> Notification of Appointment Modification
SCN6	Update appointment for other encounter type	<u>HL7 Message Structure</u> S12

Message Format

<u>Required eHR Segment</u>	<u>SIU^S14</u>	<u>Schedule Information Unsolicited</u>	<u>Chapter in HL7 Specification</u>
✓	MSH	Message Header	2
✓	SCH [{ TQ1 }] [{ NTE }]	Schedule Activity Information Timing/Quantity Notes and Comments for the SCH	10 4 2
	[{ ✓ PID [PD1] ✓ PV1] ✓ PV2] [{ OBX }] [{ DG1 }] }] {	--- PATIENT begin Patient Identification Additional Demographics Patient Visit Patient Visit - Additional Info Observation/Result Diagnosis	3 3 3 3 4 6

[{ NTE }]	Notes and Comments for the AIP	2
}	--- PERSONNEL_RESOURCE end	
]	--- RESOURCE end	
}		
✓ [Signature]	XML Digital Signature	

9.2.6 Assumption of HL7 Message Event “SIU^S14” Usage

- an existing appointment record in eHR to be updated

9.2.7 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘S14’ will be described.

Data Component Required: Person Identity, Encounter, Episode, Visit, Referral Source and Case Healthcare Professional

Purpose: To uniquely and accurately identify the eHR appointment and update the whole set of appointment data

HCR Information

(Refer to the ‘HCR Information’ in Section 8.1.7 - Data Interface Requirements)

Detail Information

(Refer to the ‘Detail Information’ in Section 8.1.7 - Data Interface Requirements)

9.3 CANCEL APPOINTMENT

The following sections describe the scenarios where deleted appointments in HCP should be uploaded to eHR.

9.3.1 Cancel Appointment for Inpatient (SCN7)

Description

When an inpatient appointment record was sent to eHR, and subsequently a deletion of the appointment is made by a HCP, the deleted appointment record should be submitted to eHR again.

9.3.2 Cancel Appointment for Outpatient (SCN8)

Description

When an outpatient appointment record was sent to eHR, and subsequently a deletion of the appointment is made by a HCP, the deleted appointment record should be submitted to eHR again.

9.3.3 Cancel Appointment for Other Encounter Type (SCN9)

Description

When other encounter type patient appointment record was sent to eHR, and subsequently a deletion of the appointment is made by a HCP, the deleted appointment record should be submitted to eHR again.

9.3.4 General Workflow

- i. HCP deletes an appointment record in her local system. The system recognises that the appointment has already been submitted to eHR.
- ii. The system constructs a message that contains HCR's identity information and the identifying information of the appointment record to be deleted.
- iii. HCP sends the message to eHR. The corresponding appointment record will be deleted in eHR by using the Record key provided by HCP.

9.3.5 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN7	Cancel appointment for inpatient	<u>Message Event Code</u> SIU^S15
SCN8	Cancel appointment for outpatient	<u>Event Name</u> Notification of Appointment Cancellation
SCN9	Cancel appointment for other encounter type	<u>HL7 Message Structure</u> S12

Message Format

<u>Required eHR Segment</u>	<u>SIU^S15</u>	<u>Schedule Information</u>	<u>Chapter in HL7 Specification</u>
✓	MSH	Message Header	2
✓	SCH [{ TQ1 }] [{ NTE }]	Schedule Activity Information Timing/Quantity Notes and Comments for the SCH	10 4 2
	[{ ✓ PID [PD1] ✓ [PV1] ✓ [PV2] ✓ [{ OBX }] [{ DG1 }] }] {	--- PATIENT begin Patient Identification Additional Demographics Patient Visit Patient Visit - Additional Info Observation/Result Diagnosis	3 3 3 3 4 6
✓	RGS [{ AIS [{ NTE }] }] [{ AIG [{ NTE }] }] [{ AIL [{ NTE }] }] [{ AIP [{ NTE }] }]	--- PATIENT end --- RESOURCES begin Resource Group Segment --- SERVICE begin Appointment Information-Service Notes and Comments for the AIS --- SERVICE end --- GENERAL_RESOURCE begin Appointment Information - General Resource Notes and Comments for the AIG --- GENERAL_RESOURCE end --- LOCATION_RESOURCE begin Appointment Information – Location Resource Notes and Comments for the AIL --- LOCATION_RESOURCE end --- PERSONNEL_RESOURCE begin Appointment Information – Personnel Resource Notes and Comments for the AIP --- PERSONNEL_RESOURCE end	10 10 2 10 2 10 2 10 2

✓] --- RESOURCE end
} [Signature] XML Digital Signature

9.3.6 Assumption of HL7 Message Event “SIU^S15” Usage

- an existing appointment record in eHR to be deleted

9.3.7 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘S15’ will be described.

Data Component Required: Person Identity, Encounter

Purpose: To uniquely and accurately identify the eHR appointment data

HCR Information

(Refer to the ‘HCR Information’ in Section 8.1.7 - Data Interface Requirements)

Detail Information

(Refer to the ‘Detail Information’ in Section 8.1.7 - Data Interface Requirements)

9.4 CREATE ADMISSION OR ATTENDANCE

The following sections describe the scenarios where new admission or attendance records created in HCP should be uploaded to eHR.

9.4.1 Create Admission for Inpatient (SCN10)

Description

When a new admission record is created for an inpatient in HCP, such admission record should be submitted to eHR.

9.4.2 Create Admission for A&E Patient (SCN11)

Description

When a new admission record is created for an A&E patient in HCP, such admission record should be submitted to eHR.

9.4.3 Create Attendance for Outpatient (SCN12)

Description

When a new attendance record is created for an outpatient in HCP, such attendance record should be submitted to eHR.

9.4.4 Create Attendance for Other Encounter Type (SCN13)

Description

When a new attendance record is created for other encounter type patient in HCP, such attendance record should be submitted to eHR.

9.4.5 General Workflow

- i. HCP creates an admission or attendance record for a patient and stores the record in her local system. The system recognises the record has not been submitted to eHR before.
- ii. HCP local system assembles messages representing the new admission or attendance record according to the data requirements based on the HCP declared data compliance level.
- iii. If the HCP has ensured the completeness and correctness of the new admission or attendance record, she can submit the record to eHR.

9.4.6 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN10	Create admission for inpatient	<u>Message Event Code</u> ADT^A01 <u>Event Name</u> Admit/Visit Notification <u>HL7 Message Structure</u> A01
SCN11	Create admission for A&E patient	<u>Message Event Code</u> ADT^A04

9.5 UPDATE ADMISSION OR ATTENDANCE

The following sections describe the scenarios where updated admission or attendance records in HCP should be uploaded to eHR.

9.5.1 Update Admission For Inpatient (SCN14)

Description

When an inpatient admission record was sent to eHR, and subsequently a modification on the admission record is made by a HCP, the updated admission record should be submitted to eHR again.

9.5.2 Update Admission For A&E Patient (SCN15)

Description

When an A&E patient admission record was sent to eHR, and subsequently a modification on the admission record is made by a HCP, the updated admission record should be submitted to eHR again.

9.5.3 Update Attendance For Outpatient (SCN16)

Description

When an outpatient attendance record was sent to eHR, and subsequently a modification on the attendance record is made by a HCP, the updated attendance record should be submitted to eHR again.

9.5.4 Update Attendance For Other Encounter Type (SCN17)

Description

When other encounter type patient attendance record was sent to eHR, and subsequently a modification on the attendance record is made by a HCP, the updated attendance record should be submitted to eHR again.

9.5.5 General Workflow

- i. HCP modifies an admission or attendance record in her local system for whatever. The system recognises that the prior version of the admission or attendance record has already been submitted to eHR before.
- ii. The system constructs a message that contains the complete set of updated admission or attendance record data with the Record key of the record to be amended.
- iii. HCP sends the message with the latest ‘Encounter’ data to eHR for amendment. The existing admission or attendance record in eHR will then be overridden by the new set of data according to the Record key provided by HCP.

9.5.6 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN14	Update admission for inpatient	<u>Message Event Code</u> ADT^A08
SCN15	Update admission for A&E patient	<u>Event Name</u> Update Patient Information
SCN16	Update attendance for outpatient	
SCN17	Update attendance for other encounter type	<u>HL7 Message Structure</u> A01

Message Format

Required eHR Segment	ADT^A08	ADT Message	Chapter in HL7 Specification

9.5.7 Assumption of HL7 Message Event “ADT^A08” Usage

- an existing admission/ admission record in eHR to be updated

9.5.8 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘A08’ will be described.

Data Component Required: Person Identity, Encounter, Episode, Visit, Referral Source and Case Healthcare Professional

Purpose: To uniquely and accurately identify the eHR admission or attendance data and update whole set of admission or attendance data

HCR Information

(Refer to the ‘HCR Information’ in Section 8.4.8 - Data Interface Requirements)

Detail Information

(Refer to the ‘Detail Information’ in Section 8.4.8 - Data Interface Requirements)

9.6 CANCEL ADMISSION OR ATTENDANCE

The following sections describe the scenarios where deleted admission or attendance records in HCP should be uploaded to eHR.

9.6.1 Cancel Admission for Inpatient (SCN18)

Description

When an inpatient admission record was sent to eHR, and subsequently a deletion of the admission record is made by a HCP, the deleted admission record should be submitted to eHR again.

9.6.2 Cancel Admission for A&E Patient (SCN19)

Description

When an A&E patient admission record was sent to eHR, and subsequently a deletion of the admission record is made by a HCP, the deleted admission record should be submitted to eHR again.

9.6.3 Cancel Attendance for Outpatient (SCN20)

Description

When an outpatient attendance record was sent to eHR, and subsequently a deletion of the attendance record is made by a HCP, the deleted attendance record should be submitted to eHR again.

9.6.4 Cancel Attendance for Other Encounter Type (SCN21)

Description

When other encounter type patient attendance record was sent to eHR, and subsequently a deletion of the attendance record is made by a HCP, the deleted attendance record should be submitted to eHR again.

9.6.5 General Workflow

- i. HCP deletes an admission or attendance record in her local system. The system recognises that the admission or attendance record has already been submitted to eHR.
- ii. The system constructs a message that contains HCR's identity information and the identifying information of the admission or attendance record to be deleted.
- iii. HCP sends the message to eHR. The corresponding admission or attendance record will be deleted in eHR by using the Record key provided by HCP.

9.6.6 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN18	Cancel admission for inpatient	<u>Message Event Code</u> ADT^A11
SCN19	Cancel admission for A&E patient	<u>Event Name</u> Cancel Admit / Visit Notification
SCN20	Cancel attendance for outpatient	
SCN21	Cancel attendance for other encounter type	<u>HL7 Message Structure</u> A09

Message Format

Required eHR Segment	ADT^A11	ADT Message	Chapter in HL7 Specification
✓	MSH	Message Header	2
	[{ SFT }]	Software Segment	2
✓	EVN	Event Type	3
✓	PID	Patient Identification	3
	[PD1]	Additional Demographics	3
✓	PV1	Patient Visit	3
✓	[PV2]	Patient Visit - Additional Info.	3
	[{ DB1 }]	Disability Information	3
✓	[{ OBX }]	Observation/Result	7
	[{ DG1 }]	Diagnosis Information	6
✓	[Signature]	XML Digital Signature	

9.6.7 Assumption of HL7 Message Event “ADT^A11” Usage

- an existing admission/ attendance record in eHR to be deleted

9.6.8 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘A11’ will be described.

Data Component Required: Person Identity, Encounter, Episode and Visit

Purpose: To uniquely and accurately identify the eHR admission or attendance data

HCR Information

(Refer to the ‘HCR Information’ in Section 8.4.8 - Data Interface Requirements)

Detail Information

(Refer to the ‘Detail Information’ in Section 8.4.8 - Data Interface Requirements)

9.7 DISCHARGE

The following sections describe the scenarios where new discharge records created in HCP should be uploaded to eHR.

9.7.1 Discharge of Inpatient (SCN22)

Description

When a new discharge record is created for an inpatient in HCP, such discharge record should be submitted to eHR.

9.7.2 Discharge of A&E Patient (SCN23)

Description

When a new discharge record is created for an A&E patient in HCP, such discharge record should be submitted to eHR.

9.7.3 General Workflow

- i. HCP creates a discharge record for a patient and stores the record in her local system. The system recognises the record has not been submitted to eHR before.
- ii. HCP local system assembles messages representing the new discharge record according to the data requirements based on the HCP declared data compliance level.
- iii. If HCP has ensured the completeness and correctness of the new discharge record, she can submit the record to eHR.

9.7.4 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL-7-HK Message Standards
SCN22	Discharge of inpatient	<u>Message Event Code</u> ADT^A03
SCN23	Discharge of A&E patient	<u>Event Name</u> Discharge / End Visit <u>HL7 Message Structure</u> A03

Message Format

<u>Required eHR Segment</u>	<u>ADT^A03</u>	<u>ADT Message</u>	<u>Chapter in HL7 Specification</u>
✓	MSH	Message Header	2
	[{ SFT }]	Software Segment	2
✓	EVN	Event Type	3
✓	PID	Patient Identification	3
	[PD1]	Additional Demographics	3
✓	[{ ROL }]	Role	15
	[{ NK1 }]	Next of Kin / Associated Parties	3
✓	PV1	Patient Visit	3
✓	[PV2]	Patient Visit - Additional Info.	3
	[{ ROL }]	Role	15
	[{ DB1 }]	Disability Information	3
	[{ AL1 }]	Allergy Information	3
	[{ DG1 }]	Diagnosis Information	6
	[DRG]	Diagnosis Related Group	6
	[{	--- PROCEDURE begin	
	PR1	Procedures	6
	[{ ROL }]	Role	15
	}	--- PROCEDURE end	
✓	[{ OBX }]	Observation/Result	7
	[{ GT1 }]	Guarantor	6
	[{	--- INSURANCE begin	
	IN1	Insurance	6
	[IN2]	Insurance Additional Info.	6
	[{ IN3 }]	Insurance Additional Info - Cert.	6
	[{ ROL }]	Role	15
	}	--- INSURANCE end	
	[ACC]	Accident Information	6
	[PDA]	Patient Death and Autopsy	3
✓	[Signature]	XML Digital Signature	

9.7.5 Assumption of HL7 Message Event “ADT^A03” Usage

- a new discharge record created in HCP and to be submitted to eHR; or
- an existing discharge record in eHR to be updated

9.7.6 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘A03’ will be described.

Data Component Required: Person Identity, Encounter, Episode, Referral Source and Case Healthcare Professional

Purpose: To uniquely and accurately identify the HCR and create discharge data

HCR Information

	Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)	
Data Element	Inpatient	A&E patient
eHR number	(Refer to the 'HCR Information' in Section 8.1.7 - Data Interface Requirements)	
HKIC number		
Type of identity document		
Identity document number		
English surname		
English given name		
English full name		
Sex		
Date of birth		
eHR record type		

Detail Information

	Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)	
Data Element	Inpatient	A&E patient
Record key	M	M
Episode number	M	M
Attendance institution identifier	O	O
Encounter healthcare provider identifier	M	M
Encounter healthcare institution identifier	M	M
Encounter type	M Fixed value "I" is expected	M Fixed value "A" is expected

Technical Interface Specification for Encounter Record

Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)		
Data Element	Inpatient	A&E patient
Encounter service type (Retained for backward compatibility to v1.0.0)	N/A	N/A
Encounter service type details (Retained for backward compatibility to v1.0.0)	N/A	N/A
Appointment number	O	N/A
Episode start datetime	M	M
Episode urgency	O <i>(- If Urgency type is 'E', Encounter type must be 'T' or 'I' or 'H'</i> <i>- If Urgency type is 'S', Encounter type must be 'T' or 'O' or 'I' or 'H'</i> <i>- If Urgency type is 'W', Encounter type must be 'O' or 'H')</i>	N/A
Episode start specialty	O	O
Episode start specialty remarks	O	O
Episode attendance indicator	O	O
Episode end datetime	M	M
Episode end specialty	O	O
Episode end specialty remarks	O	O
Death before arrival indicator	O	O
Discharge type	M	M
Discharge-to-institution identifier	O M if [Discharge-to-institution long name] is not blank	O M if [Discharge-to-institution long name] is not blank
Discharge-to-institution long name	O M if [Discharge-to-institution identifier] is not blank	O M if [Discharge-to-institution identifier] is not blank

Technical Interface Specification for Encounter Record

Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)		
Data Element	Inpatient	A&E patient
Discharge-to-institution local name	O M if [Discharge-to-institution identifier] is not blank	O M if [Discharge-to-institution identifier] is not blank
Discharge healthcare professional identifier <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Discharge healthcare professional name prefix <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Discharge healthcare professional English name <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Discharge healthcare professional English given name <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Discharge healthcare professional Chinese name <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Discharge healthcare professional Chinese name suffix <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Visit number	N/A	N/A
Visit clinic identifier	N/A	N/A
Visit clinic long name	N/A	N/A
Visit clinic local name	N/A	N/A
Visit datetime	N/A	N/A
Visit urgency	N/A	N/A
Visit specialty	N/A	N/A

Technical Interface Specification for Encounter Record

Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)		
Data Element	Inpatient	A&E patient
Visit specialty remarks	N/A	N/A
Visit attendance indicator	N/A	N/A
Attending healthcare professional identifier <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Attending healthcare professional name prefix <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Attending healthcare professional English name <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Attending healthcare professional English given name <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Attending healthcare professional Chinese name <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Attending healthcare professional Chinese name suffix <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Referral number	O	O
Refer-from-institution identifier	O M if [Refer-from-institution long name] is not blank	O M if [Refer-from-institution long name] is not blank
Refer-from-institution long name	O M if [Refer-from-institution identifier] is not blank	O M if [Refer-from-institution identifier] is not blank

Technical Interface Specification for Encounter Record

Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)		
Data Element	Inpatient	A&E patient
Refer-from-institution local name	O M if [Refer-from-institution identifier] is not blank	O M if [Refer-from-institution identifier] is not blank
Refer-from-healthcare professional English name	O	O
Refer-from-healthcare professional Chinese name	O	O
Refer-from-encounter number	O	O
Referral source code	O	O
Referral source description	O M if [Referral source code] is not blank	O M if [Referral source code] is not blank
Referral source local description	O	O
Referral specialty	O	O
Referral specialty remarks	O	O
Case healthcare professional identifier <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Case healthcare professional name prefix <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Case healthcare professional English name	O	O

Case healthcare professional Chinese name	O	O

Technical Interface Specification for Encounter Record

Mandatory (M)/ Optional (O)/ Not Applicable (N/A – Data field should not be submitted. eHR will ignore the value even submitted.)		
Data Element	Inpatient	A&E patient
Case healthcare professional Chinese name suffix <i>(Retained for backward compatibility to v1.0.0)</i>	N/A	N/A
Record creation datetime		
Record creation institution identifier		
Record creation institution name		
Record last update datetime		
Record update institution identifier	<i>(Refer to the 'Detail Information' in Section 8.1.7 - Data Interface Requirements)</i>	
Record update institution name		
Transaction datetime		
Last update datetime		
Transaction profile type	M Fixed value: “DIS-IP”	M Fixed value: “DIS-AE”

9.8 CANCEL DISCHARGE

The following sections describe the scenarios where deleted discharge records in HCP should be uploaded to eHR.

9.8.1 Cancel Discharge of Inpatient (SCN24)

Description

When an inpatient discharge record was sent to eHR, and subsequently a deletion of the discharge record is made by a HCP, the deleted discharge record should be submitted to eHR again.

9.8.2 Cancel Discharge of A&E Patient (SCN25)

Description

When an A&E patient discharge record was sent to eHR, and subsequently a deletion of the discharge record is made by a HCP, the deleted discharge record should be submitted to eHR again.

9.8.3 General Workflow

- i. HCP deletes a discharge record in her local system. The system recognises that the discharge record has already been submitted to eHR.
- ii. The system constructs a message that contains HCR's identity information and the identifying information of the discharge record to be deleted.
- iii. HCP sends the message to eHR. The corresponding discharge record will be deleted in eHR by using the Record key provided by HCP.

9.8.4 Message Event Details

The following event information is referring to HL7 version 2.5 messaging standards. The details of HL7 segments can be found in HL7 specification. For updated HL7 specifications, please visit the websites.

Scenario No.	Description	HL7-HK Message Standards
SCN24	Cancel discharge of inpatient	<u>Message Event Code</u> ADT^A13
SCN25	Cancel discharge of A&E patient	<u>Event Name</u> Discharge / End Visit <u>HL7 Message Structure</u> A01

9.8.5 Assumption of HL7 Message Event “ADT^A13” Usage

- an existing discharge record in eHR to be deleted

9.8.6 Data Interface Requirements

In this section, the data elements embedded in the trigger event ‘A13’ will be described.

Data Component Required: Person Identity, Encounter and Episode

Purpose: To uniquely and accurately identify the eHR discharge data

HCR Information

(Refer to the ‘HCR Information’ in Section 8.7.6 - Data Interface Requirements)

Detail Information

(Refer to the ‘Detail Information’ in Section 8.7.6 - Data Interface Requirements)

10 DATA MAPPING

10.1 MSH (APPLIED IN ALL SCENARIOS)

10.15 XML DIGITAL SIGNATURE ON HL7

The HL7 signature is for message exchange using SFTP and ebMS. The components of XML digital signature are listed below:

No.	XML Tag	XPath	Attribute	Element Name	Mandatory (M) / Optional(O)	Remarks
1	Signature	Signature		Signature	M	Sign the HL7 message (Please refer to "XML Signature Syntax and Processing (Second Edition)" provided by W3C Recommendation 10 June 2008)
			@xmlns		M	Fixed Value: "http://www.w3.org/2000/09/xmldsig#"
2	SignedInfo	Signature/SignedInfo		Signed Information	M	
2.1	CanonicalizationMethod	Signature/SignedInfo/CanonicalizationMethod		Canonicalization Method	M	
			@Algorithm	Algorithm	M	Fixed Value: "http://www.w3.org/TR/2001/REC-xml-c14n-20010315"
2.2	SignatureMethod	Signature/SignedInfo/SignatureMethod		Signature Method	M	
			@Algorithm	Algorithm	M	Fixed Value: "http://www.w3.org/2001/04/xmldsig-more#rsa-sha256"
2.3	Reference	Signature/SignedInfo/Reference		Reference element for the whole HL7 document	M	

No.	XML Tag	XPath	Attribute	Element Name	Mandatory (M) / Optional(O)	Remarks
			@ URI	URI	M	Fixed Value: “” (<i>Empty String</i>). Apply the signature to the whole HL7 document
2.3.1	Transforms	Signature/SignedInfo/Reference/Transforms		Transforms	M	
2.3.1.1	Transform	Signature/SignedInfo/Reference/Transforms/Transform		Transform	M	
			@Algorithm	Algorithm	M	Fixed Value: “ http://www.w3.org/2000/09/xmldsig#enveloped-signature ”
2.3.2	DigestMethod	Signature/SignedInfo/Reference/DigestMethod			M	
			@Algorithm	Algorithm	M	Fixed Value: “ http://www.w3.org/2001/04/xmlenc#sha256 ”

11 DATA MAPPING FOR HL7-HK MESSAGE STANDARDS

11.1 CLINICAL INFORMATION

In general, the clinical information can be divided into two sections: ‘HCR’, ‘Detail’.

In the ‘HCR’ section, information includes:

- HCR Identity Data

In the ‘Detail’ section, clinical information of the subject domain will be included:

- Transaction Data
- Encounter Details

Both HCR and Detail Information are mapped to HL7 v.2.5 in XML format

It is assumed that the described scenarios below will trigger the transfer of Encounter data. They are:

- Create appointment for inpatient (SCN1)
- Create appointment for outpatient (SCN2)
- Create appointment for other encounter type (SCN3)
- Update appointment for inpatient (SCN4)
- Update appointment for outpatient (SCN5)
- Update appointment for other encounter type (SCN6)
- Cancel appointment for inpatient (SCN7)
- Cancel appointment for outpatient (SCN8)
- Cancel appointment for other encounter type (SCN9)
- Create admission for inpatient (SCN10)
- Create admission for A&E patient (SCN11)
- Create attendance for outpatient (SCN12)
- Create attendance for other encounter type (SCN13)
- Update admission for inpatient (SCN14)
- Update admission for A&E patient (SCN15)
- Update attendance for outpatient (SCN16)
- Update attendance for other encounter type (SCN17)
- Cancel admission for inpatient (SCN18)
- Cancel admission for A&E patient (SCN19)
- Cancel attendance for outpatient (SCN20)
- Cancel attendance for other encounter type (SCN21)
- Discharge of inpatient (SCN22)
- Discharge of A&E patient (SCN23)
- Cancel discharge of inpatient (SCN24)
- Cancel discharge of A&E patient (SCN25)

For details of scenarios, please refer to Data Requirement Specification for eHR Encounter Record.

11.2 ENCOUNTER MAPPED DATA TO HL7 FIELDS

The data mappings of elements in ‘HCR’ and ‘Detail’ sections will be described as below:

<HCR> Section

No.	Data Field	XML Tag	XPath	Maximum Length	Remarks
1	eHR number	PID.2	PID.2/CX.1	string(12)	Fixed length
2	HKIC number	PID.3	PID.3/CX.1	string(12)	
3	Type of identity document	PID.3	PID.3/CX.5	string(6)	<p>Refer to <i>Section 14.3 - Localisation of the data type of <PID.3>/<CX.5> to 'IS'</i> for the HL7 localisation</p> <p>Refer to the code set of “Type of identity document” in eHR Office website</p>
4	Identity document number	PID.3	PID.3/CX.1	string(30)	
5	English surname	PID.5	PID.5/XPN.1/FN.1	string(40)	
6	English given name	PID.5	PID.5/XPN.2	string(40)	

No.	Data Field	XML Tag	XPath	Maximum Length	Remarks
7	English full name	PID.5	PID.5/XPN.9/CE.2	string(100)	<p>Full name should be in uppercase letters.</p> <p>In format of : [Surname]+[,]+ 1 white space +[Given Name]</p> <p>e.g CHAN, TAI MAN</p> <p><i>* If patient has either English surname or given name stored in local EMR system, full name should be filled.</i></p>
8	Sex	PID.8	PID.8	string(1)	Refer to the code set of “Sex” in eHR Office website
9	Date of birth	PID.7	PID.7/TS.1	string(23)	<p>In format: YYYYMMDD</p> <p>Remarks:</p> <ul style="list-style-type: none"> • If date is exact to ‘Year’ (e.g. 2010), the unknown month and day is suggested to be set as ‘0101’ E.g. 20100101 • If date is exact to ‘Month’(e.g. 2010-12), the unknown day is suggested to be set as ‘01’ E.g. 20101201

<Detail> Section

The table below shows the data mapping of clinical information for Encounter Record.

No.	Data Field	XML Tag	XPath	Maximum Length	Remarks
1	Record key	OBX.5	OBX.5	string(50)	Same record key should be used for same episode
2	Transaction datetime	OBX.5	OBX.5	string(23)	In format: YYYYMMDDhhmmss[.s[s[s]]] e.g. 20100131 163005.005
3	Last update datetime	OBX.5	OBX.5	string(23)	In format: YYYYMMDDhhmmss[.s[s[s]]] e.g. 20100131 163005.005
4	Episode number	PV1.19	PV1.19/CX.1	string(20)	
5	Attendance institution identifier	PV1.19	PV1.19/CX.6/HD.1	string(10)	Fixed length
6	Encounter healthcare provider identifier	OBX.5	OBX.5	string(10)	Fixed length
7	Encounter healthcare institution identifier	<u>SCN1-6</u> SCH.16 <u>SCN7-19</u> OBX.5	<u>SCN1-6</u> SCH.16/XCN.14/HD.1 <u>SCN7-19</u> OBX.5	string(10)	Fixed length
8	Encounter type	PV1.2	PV1.2	string(1)	<ul style="list-style-type: none"> • Refer to the code set of “Encounter Type” in eHR Office website • Refer to <i>Section 14.2 - Localisation of HL7 Table 0004</i> for the HL7 localisation

Technical Interface Specification for Encounter Record

No.	Data Field	XML Tag	XPath	Maximum Length	Remarks
9	Encounter service type (Retained for backward compatibility to v1.0.0)	PV1.10	PV1.10	string(10)	Refer to the code set of “Service Type” in eHR Office website

12 OTHER REQUIREMENTS

12.1 CHARACTER SET AND ENCODING

Unicode Transformation Format – 8 bit (UTF-8) will be used in eHR Clinical Data Sharing data exchange. HCP is required to ensure the file that sent to eHR should use UTF-8 encoding as below:

Data File Type	Character and Encoding	Version
HL7 message (e.g. ADT^A01)	UTF-8	XML 1.0

12.2 XML PREDEFINED ENTITIES

Extensible Markup Language (XML) is adopted in eHR Clinical Data Sharing data exchange using HL7 messages. The XML specification defines five “predefined entities” representing special characters, and requires that all XML processors honor them. To render the character, the format `&name;` must be used. For example, `&` renders as the character `&`. The table below lists the 5 predefined entities in XML:

Name	Character	Entity Reference	Description
gt	>	>	Greater than
lt	<	<	Less than
amp	&	&	Ampersand
apos	'	'	Apostrophe
quot	"	"	Quotation mark

The prefix of namespace in XML in HL7 message is not expected.

13 FILE NAMING CONVENTION

This section describes the file naming standards of the files included in HL7 message under HL7-HK Message Standards. The file components include:

- HL7 Message File

13.1 HL7 MESSAGE FILE NAME

The naming convention of the file which is carrying the HL7 message is specified as below:

Format

With Sending Location Code,

<HCP ID>.<Sending Location Code>.<Record Type>.HL7.<Message Control ID>

Example

e.g. 8088450656.BRANCHA.ENCTR.HL7.20110701230000

Naming Convention

- 1 The file name should be in capital letters.
- 2 The value of each file name component should not contain dot “.”
- 3 Message Control ID refers to the value in MSH.10
- 4 If the ***<Sending Location code>*** cannot be provided, its value can be set as same as ***<HCP ID>***.
- 5 The value of the ***<Sending Location code>*** can be in any combination of alphanumeric characters i.e. [A-Z][0-9][-_]

Technical Interface Specification for Encounter Record

The following table shows the components of file name and the respective definitions:

Sequence	Component	Definition	Maximum Length	Remarks
1	HCP ID	A unique identifier assigned by eHR Healthcare Provider Index to each healthcare institution for participation in eHR Sharing System	string(10)	
2	Sending Location Code	A code to indicate the location where the data is sending from. The format should be agreed before the interface is on production.	string(20)	
3	Record Type	A standardised short term to distinguish the sharable dataset	string(20)	Fixed value: “ENCTR”
4	HL7	HL7 File	string(3)	Fixed value: HL7
5	Message Control ID	Message Control ID refers to the value in MSH.10 of HL7 file	string(14)	Values can be in any combination of alphanumeric characters i.e. [A-Z][0-9][-_]

14 MESSAGE SAMPLE AND SCENARIO EXAMPLE WORKFLOW

14.1 MESSAGE SAMPLE

For all the samples below, there are some attributes in the root element for declaring the namespaces and schema used. Details of the declaration are shown in the following table:

Attribute	Description	Value
xmlns	Default namespace	Fixed: urn:hl7-org:v2xml
xmlns:xsi	Other namespace used	Fixed: http://www.w3.org/2001/XMLSchema-instance
xsi:schemaLocation	Namespace and schema to be used	Sample: urn:hl7-org:v2xml http://www.ehealth.gov.hk/ehr/xsd/ADT_A01.xsd

14.2 SCENARIO EXAMPLE WORKFLOW

Assumption

- Kowloon General Clinic is a registered eHR healthcare institution
- Patient Mr. Chan Tai Man is a HCR

14.3 SCENARIO EXAMPLE WORKFLOW 1: CREATE AN APPOINTMENT RECORD FOR INPATIENT

Storyboard

On 1 Feb 2010 16:30, Mr. Chan Tai Man made an appointment for consultation at Kowloon General Clinic on 2 Feb 2010 16:30 with Appointment number A-123456789. The EMR system of the clinic uploaded such appointment record to eHR on 1 Feb 2010 16:32 with Record key ENCTRRECKEY0001.

Expected data sent from HCP EMR system

Data Field	Sample Value
Event code:	S12
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01
Record key:	ENCTRRECKEY0001
Encounter healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter type:	I
Appointment number:	A-123456789
Episode start datetime:	2010-02-02 16:30:05.005
Transaction datetime:	2010-02-01 16:30:05.005
Transaction profile type:	APP-IP
System datetime:	2010-02-01 16:32:05.005

Expected outcome in eHR record triggered by HL7 Event “SIU^S12”

Data Field	Sample Value
Event code:	S12
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01
Record key:	ENCTRRECKEY0001
Transaction datetime:	2010-02-01 16:30:05.005
Healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter Type:	I
Appointment number:	A-123456789
Episode start datetime:	2010-02-02 16:30:05.005

Remarks:

The appointment record with ‘Appointment number’ A-123456789 is created and ‘Record key’ is ENCTRRECKEY0001.

14.4 SCENARIO EXAMPLE WORKFLOW 2: UPDATE AN EXISTING APPOINTMENT RECORD FOR INPATIENT

Storyboard

On 1 Feb 2010 17:30, Mr. Chan Tai Man updated his Episode start datetime from 2 Feb 2010 16:30 to 2 Feb 2010 17:00 with existing Appointment number A-123456789 at Kowloon General Outpatient Clinic. The EMR system of the clinic updated such appointment record with Record key ENCTRRECKEY0001 to eHR on 1 Feb 2010 17:32.

Expected data sent from HCP EMR system

Data Field	Sample Value
Event code:	S14
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01 16:30:05.005
Record key:	ENCTRRECKEY0001
Encounter healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter type:	I
Appointment number:	A-123456789
Episode start datetime:	2010-02-02 17:00:05.005
Transaction datetime:	2010-02-01 17:30:05.005
Transaction profile type:	APP-IP
System datetime:	2010-02-01 17:32:05.005

Expected outcome in eHR record triggered by HL7 Event “SIU^S14”

Data Field	Sample Value
Event code:	S14
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01
Record key:	ENCTRRECKEY0001
Transaction datetime:	2010-02-01 17:30:05.005
Encounter healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter Type:	I
Appointment number:	A-123456789
Episode start datetime:	2010-02-02 17:00:05.005

Remarks:

The ‘**Episode start datetime**’ of the appointment record (where ‘**Appointment number**’ is A-123456789 and ‘**Record key**’ is ENCTRRECKEY0001) is updated to 2010-02-02 17:00:05.005. Besides, the corresponding ‘**Transaction datetime**’ is updated.

14.5 SCENARIO EXAMPLE WORKFLOW 3: CREATE AN ADMISSION RECORD FOR INPATIENT

Storyboard

On 2 Feb 2010 17:00, Mr. Chan Tai Man made an admission for consultation at Kowloon General Clinic with Episode number HN1234567. The EMR system of the clinic uploaded such admission record to eHR on 2 Feb 2010 17:02.

Expected data sent from HCP EMR system

Data Field	Sample Value
Event code:	A01
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN

Expected outcome in eHR record triggered by HL7 Event “ADT^A01”

Data Field	Sample Value
Event code:	A01
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01
Record key:	ENCTRRECKEY0001
Transaction datetime:	2010-02-02 17:00:05.005
Encounter healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter Type:	I
Episode number:	HN1234567
Episode start datetime:	2010-02-02 17:00:05.005

Remarks:

The admission record (where ‘Episode number’ is HN1234567 and ‘Record key’ is ENCTRRECKEY0001) is uploaded. Besides, the corresponding ‘Transaction datetime’ is updated.

14.6 SCENARIO EXAMPLE WORKFLOW 4: CREATE A DISCHARGE RECORD FOR INPATIENT

Storyboard

On 3 Feb 2010 17:00, Mr. Chan Tai Man discharged at Kowloon General Clinic with Discharge type HOME. The EMR system of the clinic uploaded such discharge record to eHR on 3 Feb 2010 17:02.

Expected data sent from HCP EMR system

Data Field	Sample Value
Event code:	A03
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01

Record key:	ENCTRRECKEY0001
Transaction datetime:	2010-02-03 17:00:05.005
Encounter healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter Type:	I
Episode number:	HN1234567
Episode start datetime:	2010-02-02 17:00:05.005
Episode end datetime:	2010-02-03 17:00:05.005
Discharge type	HOME

Remarks:

The discharge record (where ‘Episode end datetime’ is 2010-02-03 17:00:05.005 and ‘Discharge type’ is HOME) is uploaded. Besides, the corresponding ‘Transaction datetime’ is updated.

14.7 SCENARIO EXAMPLE WORKFLOW 5: CANCEL AN EXISTING DISCHARGE RECORD FOR INPATIENT

Storyboard

Due to transmission error, the existing discharge record with Record key ENCTRRECKEY0001 was cancelled on 3 Feb 2010 18:00. The EMR system of the clinic uploaded such deleted discharge record to eHR on 3 Feb 2010 18:02.

Expected data sent from HCP EMR system

Data Field	Sample Value
Event code:	A13
eHR number:	201000000001
HKIC number:	A1234563
English surname:	Chan
English given name:	Tai Man
English full name:	CHAN, TAI MAN
Sex:	M
Date of birth:	1967-01-01
Record key:	ENCTRRECKEY0001
Episode number:	HN1234567
Encounter healthcare provider identifier:	8088450656
Encounter healthcare institution identifier:	1735455950
Encounter type:	I
Episode start datetime:	2010-02-02 17:00:05.005
Episode end datetime:	2010-02-03 17:00:05.005
Discharge type	HOME
Transaction datetime:	2010-02-03 18:00:05.005
Transaction profile type:	DIS-IP
System datetime:	2010-02-03 18:02:05.005

15 LOCALISATION OF HL7 ELEMENT

15.1 LOCALISATION OF THE HL7 DATA TYPE OF <PV1-37> TO ‘CE’

<Identifier (ST)> ^ <Text (ST)> ^ <Name of Coding System (ID)> ^
<Alternate Identifier (ST)> ^ <Alternate Text (ST)> ^ <Name of
Alternate Coding System (ID)>

- Apply the change ONLY in this Encounter Dataset
- Refer to the code set of eHR Data Content Index in eHR Office website
- Affected data fields:
 - Discharge-to-institution identifier
 - Discharge-to-institution long name
 - Discharge-to-institution local name

15.2 LOCALISATION OF HL7 TABLE 0004

eHR value of Encounter type	eHR Description
A	Accident and emergency
I	Inpatient
O	Outpatient
T	Consultation without patient’s physical presence
H	Other encounter type

- Affected data fields:
 - Encounter type

15.3 LOCALISATION OF THE HL7 DATA TYPE OF <PID.3>/<CX.5> TO ‘IS’

- Data Type of PID.3/CX.5 is changed to IS type
- Apply the change ONLY in this Encounter Dataset
- Refer to the code set of “Type of identity document” in eHR Office website
- Affected data fields:
 - Type of identity document

15.4 EXTEND DATA LENGTH OF HL7 DATA TYPE 'CWE' FROM 199 TO 255

- Data Length of HL7 Data Type ‘CWE’ is extended to 255
- Apply the change ONLY in this Encounter Dataset
- Affected data fields:
 - Visit clinic long name
 - Visit clinic local name
 - Refer-from-institution long name
 - Refer-from-institution local name

16 APPENDIX

16.1 TRANSACTION PROFILE TYPE

Code	Description
APP-IP	Inpatient appointment
APP-OP	Outpatient appointment without episode number
APP-OP-EP	Outpatient appointment with episode number
APP-OTH	Other encounter type appointment
ADM-IP	Inpatient admission
ADM-AE	A & E patient admission
ADM-OP	Outpatient attendance without episode number
ADM-OP-EP	Outpatient attendance with episode number
ADM-OTH	Other encounter type attendance
DIS-IP	Inpatient discharge
DIS-AE	A & E patient discharge

16.2 OBX.3 POSSIBLE VALUE LIST

Value	Used in Scenarios
Transaction datetime	All
Last update datetime	All
Record key	All
Encounter healthcare provider identifier	All
Encounter healthcare institution identifier	10-25
Record creation datetime	All
Record creation institution identifier	All
Record creation institution name	All
Record last update datetime	All
Record update institution identifier	All
Record update institution name	All
Episode start specialty remarks	All Not applied if Transaction profile type = 'APP-OP' or 'ADM-OP' (mapped in <MSH.21>)
Referral number	All
Referral source code	All
Referral source description	All
Referral source local description	All
Referral specialty	All
Referral specialty remarks	All

Technical Interface Specification for Encounter Record

Encounter service type details (Retained for backward compatibility to v1.0.0)	2-3, 5-6, 8-9, 10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘DIS-IP’ or ‘DIS-AE’ (mapped in <MSH.21>)
Visit specialty	2-3, 5-6, 8-9, 10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘DIS-IP’ or ‘DIS-AE’ (mapped in <MSH.21>)
Visit specialty remarks	2-3, 5-6, 8-9, 10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘DIS-IP’ or ‘DIS-AE’ (mapped in <MSH.21>)
Visit attendance indicator	2-3, 5-6, 8-9, 10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘DIS-IP’ or ‘DIS-AE’ (mapped in <MSH.21>)
Episode end specialty	10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘ADM-OP’ (mapped in <MSH.21>)
Episode end specialty remarks	10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘ADM-OP’ (mapped in <MSH.21>)
Death before arrival indicator	10-25 Not applied if Transaction profile type = ‘ADM-IP’ or ‘ADM-AE’ or ‘ADM-OP’ (mapped in <MSH.21>)
